

Attachments for Order Picker

Order Picker Attachments - Order preparation operation or order picking as it is more normally known is a method used in warehouse operations and consists of employees called order pickers. The order picker's task is to take and collect articles in specific quantities so as to accomplish the customer's orders prior to shipment. Order picking is an easy warehousing method. The efficiency in which this job is done could be directly connected to a supply chain's productivity. Thus, order picking is one of the most controlled logistic processes. Order picking falls in the category of the warehouse management system.

There are specific kinds of order picking which consist of: wave picking method, pick to box method, piece picking or picker to part method, sorting systems method and zone picking method.

The pick to box method involves the order picker just filling the boxes with item that are from their particular station. The box then moves on to other stations to until the order is done. In this particular technique, there is no movement of the order picker workers. In the wave picking method, the order pickers move around in order to collect the necessary items for numerous orders. The piece picking or picker to part method is similar where the order pickers or picker move in order to gather the items needed but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, products are brought to the order picker by an automatic system like for example an automatic storage system or a conveyor system. In the zone picking method, each and every order picker is assigned to one specific area. They are responsible for just realizing order picking within this particular area.
