

Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually a device made out of top quality materials intended to withstand the most demanding operations and work environments. This particular piece of equipment can enable the individual driving to control the forks hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the entire load or the arms so as to facilitate much more precise carrying and placement in a quicker and much more efficient method.

The blade pocket is somewhat unique and enables the operator to safely swing the blades into position without any fear of destroying the positioning cylinders. This could allow the driver the option to perform independent or simultaneous fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into fork positioners on available units.
