

Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Lift trucks are really pricey pieces of machinery. A five thousand pound new electric unit can cost between \$18,000 to \$25,000 and several thousands of dollars more will be invested for a battery and a battery charger. A similar internal combustion forklift of the same lift capacity will cost slightly less and the diesel models which are capable of heavier lifting capacities can cost upwards of \$100,000. Reconditioned lift trucks are an alternative to save a great deal of money in view of the fact that they cost less than half the price of new units.

Some buyers may be leery about acquiring a second-hand or reconditioned lift truck in view of the fact that they feel they will have to spend more on upkeep. Then again, a correctly reconditioned forklift will be able to operate just in addition to a brand new one. Although your lift would get heavy use, as long as you take good care of the machinery, it would serve all your requirements and potentially save you lots of money.

It is important to determine what the seller means by a refurbished or reconditioned forklift when thinking about acquiring a used forklift. Many companies do a very good job reconditioning a unit previous to selling it. This comprises disassembling the forklift, rebuilding the engine, sandblasting the lift and after that reassembling everything and finishing with a fresh coat of paint.

To correctly and meticulously rebuild a lift truck engine, a good business would entirely disassemble it. A heat cleaning system can then be used to clean all the parts. When this step has been done, all of the components are checked to see if they have any defects, any breakage or any extensive wear. Certain parts like for instance cylinder heads, crankshafts, cylinder blocks and connecting rods are reground, resurfaced and resized if needed. Several components such as nuts, bolts, gears etc. are replaced or repaired as needed.

The engine is rebuilt manually once the overhaul has been completed. After putting it back together, a series of tests are applied to the working machine. This is done to be able to check all of the parts to ensure there are no problems or leaks. If any problems occur, the necessary changes are done.

There should be no reason to be concerned about acquiring a reconditioned or refurbished lift truck from quality sellers. The process of rebuilding the machines guarantees the utmost in reliability. Repairs costs could actually work out to be less because you would avoid the initial phase of higher repairs projections that a brand new forklift has as it is broken in. By following routine repairs schedules and taking care of the equipment correctly, a reconditioned forklift would serve you well.
